BRIGHT

COFFEE SHOP

A Data Science Project

Student:
Cyliah Mosesi

Introduction

Bright Coffee Shop collects sales data from its daily transactions. This data helps the business understand customer purchasing pattern, product performance and revenue

Business Problem

Bright Coffee Shop wants to increase revenue and improve product performance. This analysis uses sales data to identify patterns and opportunities for growth.

01

Increase revenue 💸

Identify where revenue is strongest.

02

Improve products ☕

Understand high- and low-performing products.

03

Understand sales 📊

Identify useful sales patterns.

TOTAL SALES

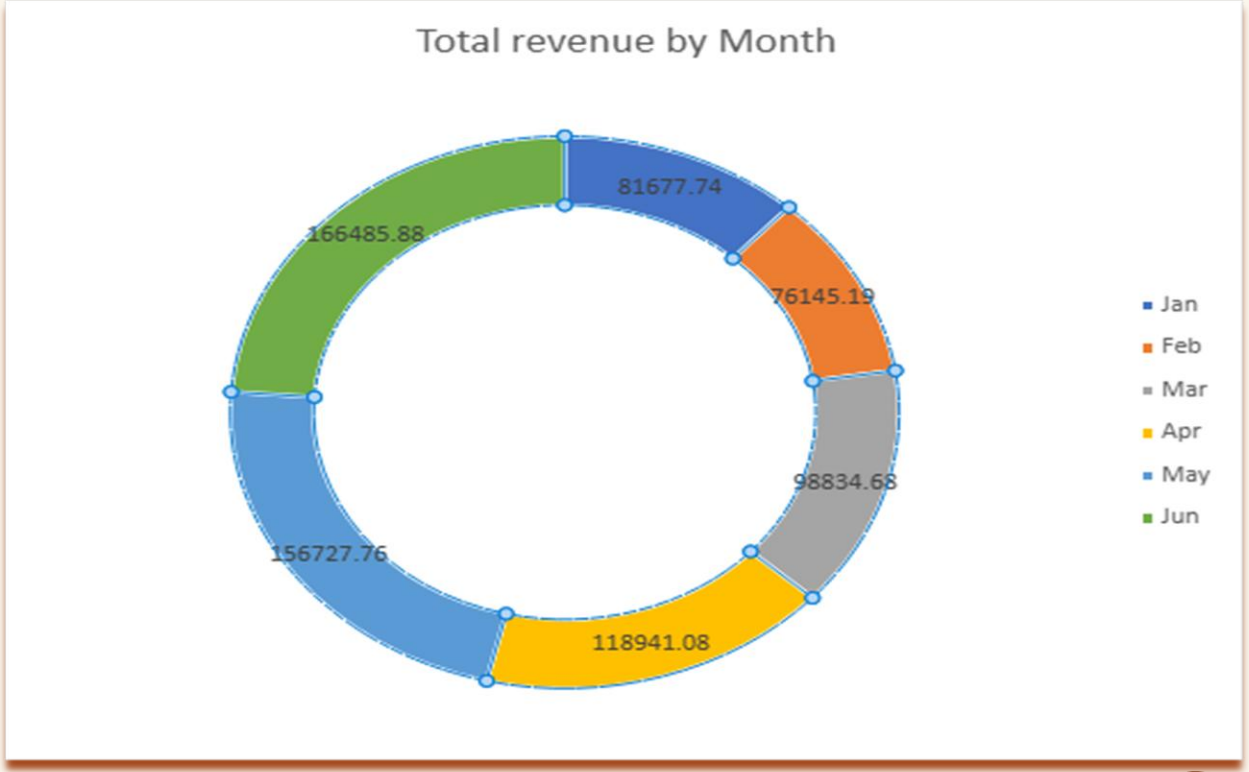

149 116

NUMBER OF STORES

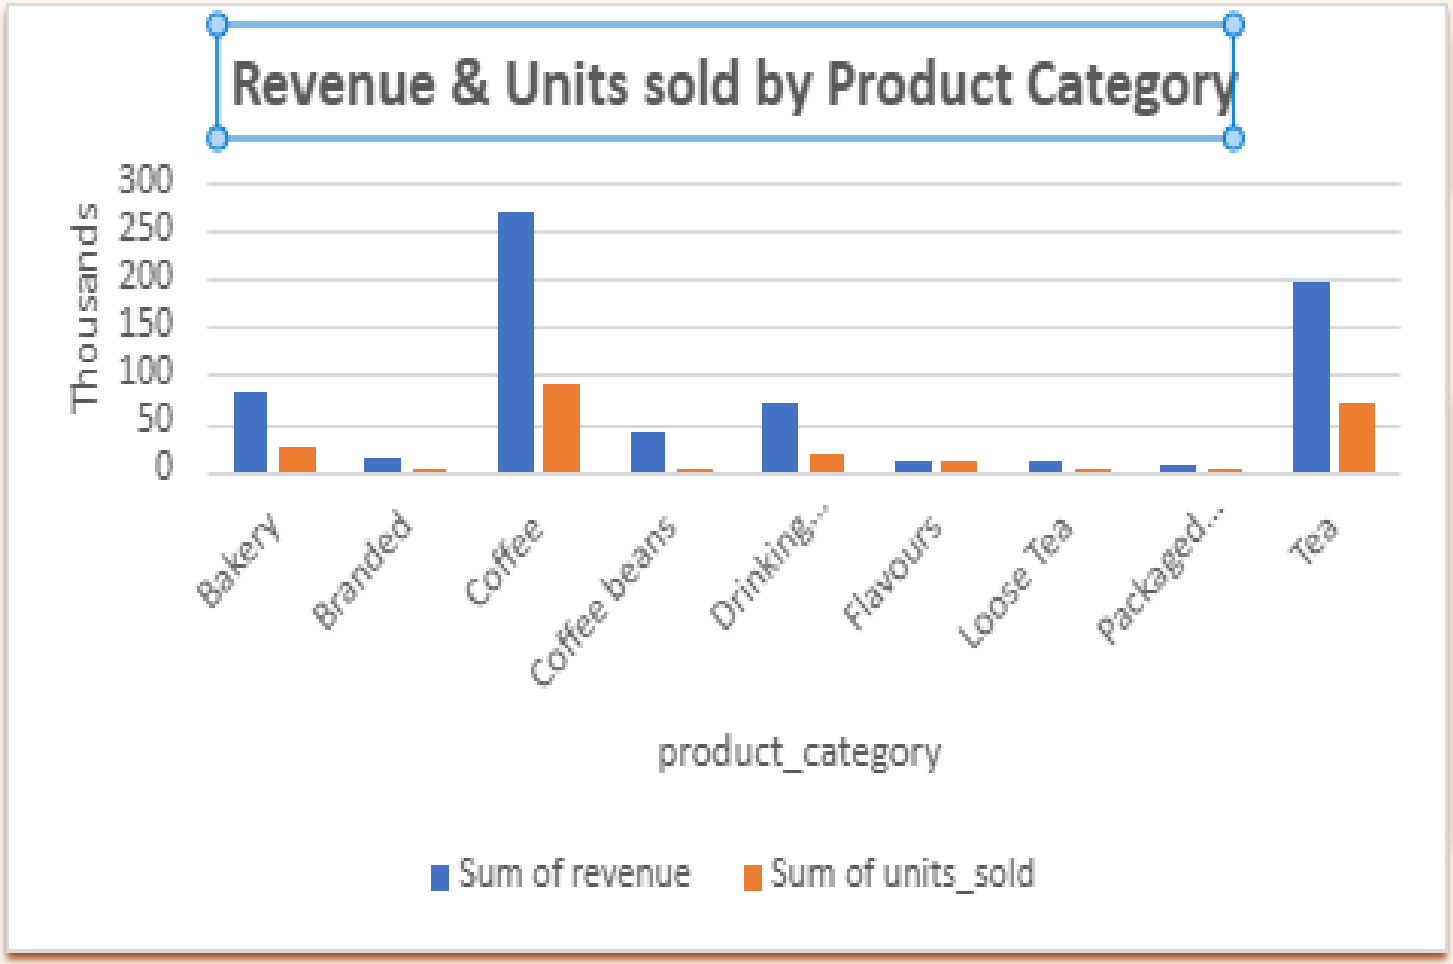

3

KEY MESSAGE

Bright Coffee made R 698,812 from 149,116 sales and 214,470 units across the three stores in the first half of 2023, with revenue rising from R81 677 in January to R166 485 in June

Product Performance

TOP SALES & REVENUE PRODUCT

COFFEE

Coffee is the engine of the business with R269 952 in revenue from 89,250 units sold across January to June 2023.

Revenue by Time

PEAK SALES TIME

Morning

Mornings carry over half the business, so the strongest team should be on the opening shift, not spread evenly across the day.

Coffee, Tea & Bakery items that peak in the morning should be stocked, baked & counted to morning demand.

Store Performance

STORE REVENUE VISUAL

BEST-PERFORMING STORE

Hell’s Kitchen

STORE INSIGHT

Hell’s Kitchen is the best performing store in Revenue, followed by Astoria then Lower Manhattan based on weekdays & weekends.

Tea 69 737
Bakery 23 214

LOW PERFORMING PRODUCTS

Packaged chocolate 487
Branded 776
Loose Tea 1210

Business Recommendations

Focus on high-performing products

Protect top sellers. Monitor coffee and tea stock daily, especially before the morning rush, to reduce missed sales caused by stock shortages.

Optimize peak sales periods

Schedule more staff during the morning peak and assign clear roles for taking orders, preparing drinks and serving customers.

Test a breakfast bundle, such as coffee and a bakery item, during morning hours

Consider a loyalty reward for repeat morning purchases.

Investigate low performers

Review weaker products like Loose Tea and Branded. Check their revenue, profit margins,
stock costs and sales trends before deciding whether to promote, adjust or discontinue them.

Learn from strong stores

Investigate good practices at the best performing location.

Compare stores fairly by considering operating hours and customer traffic.

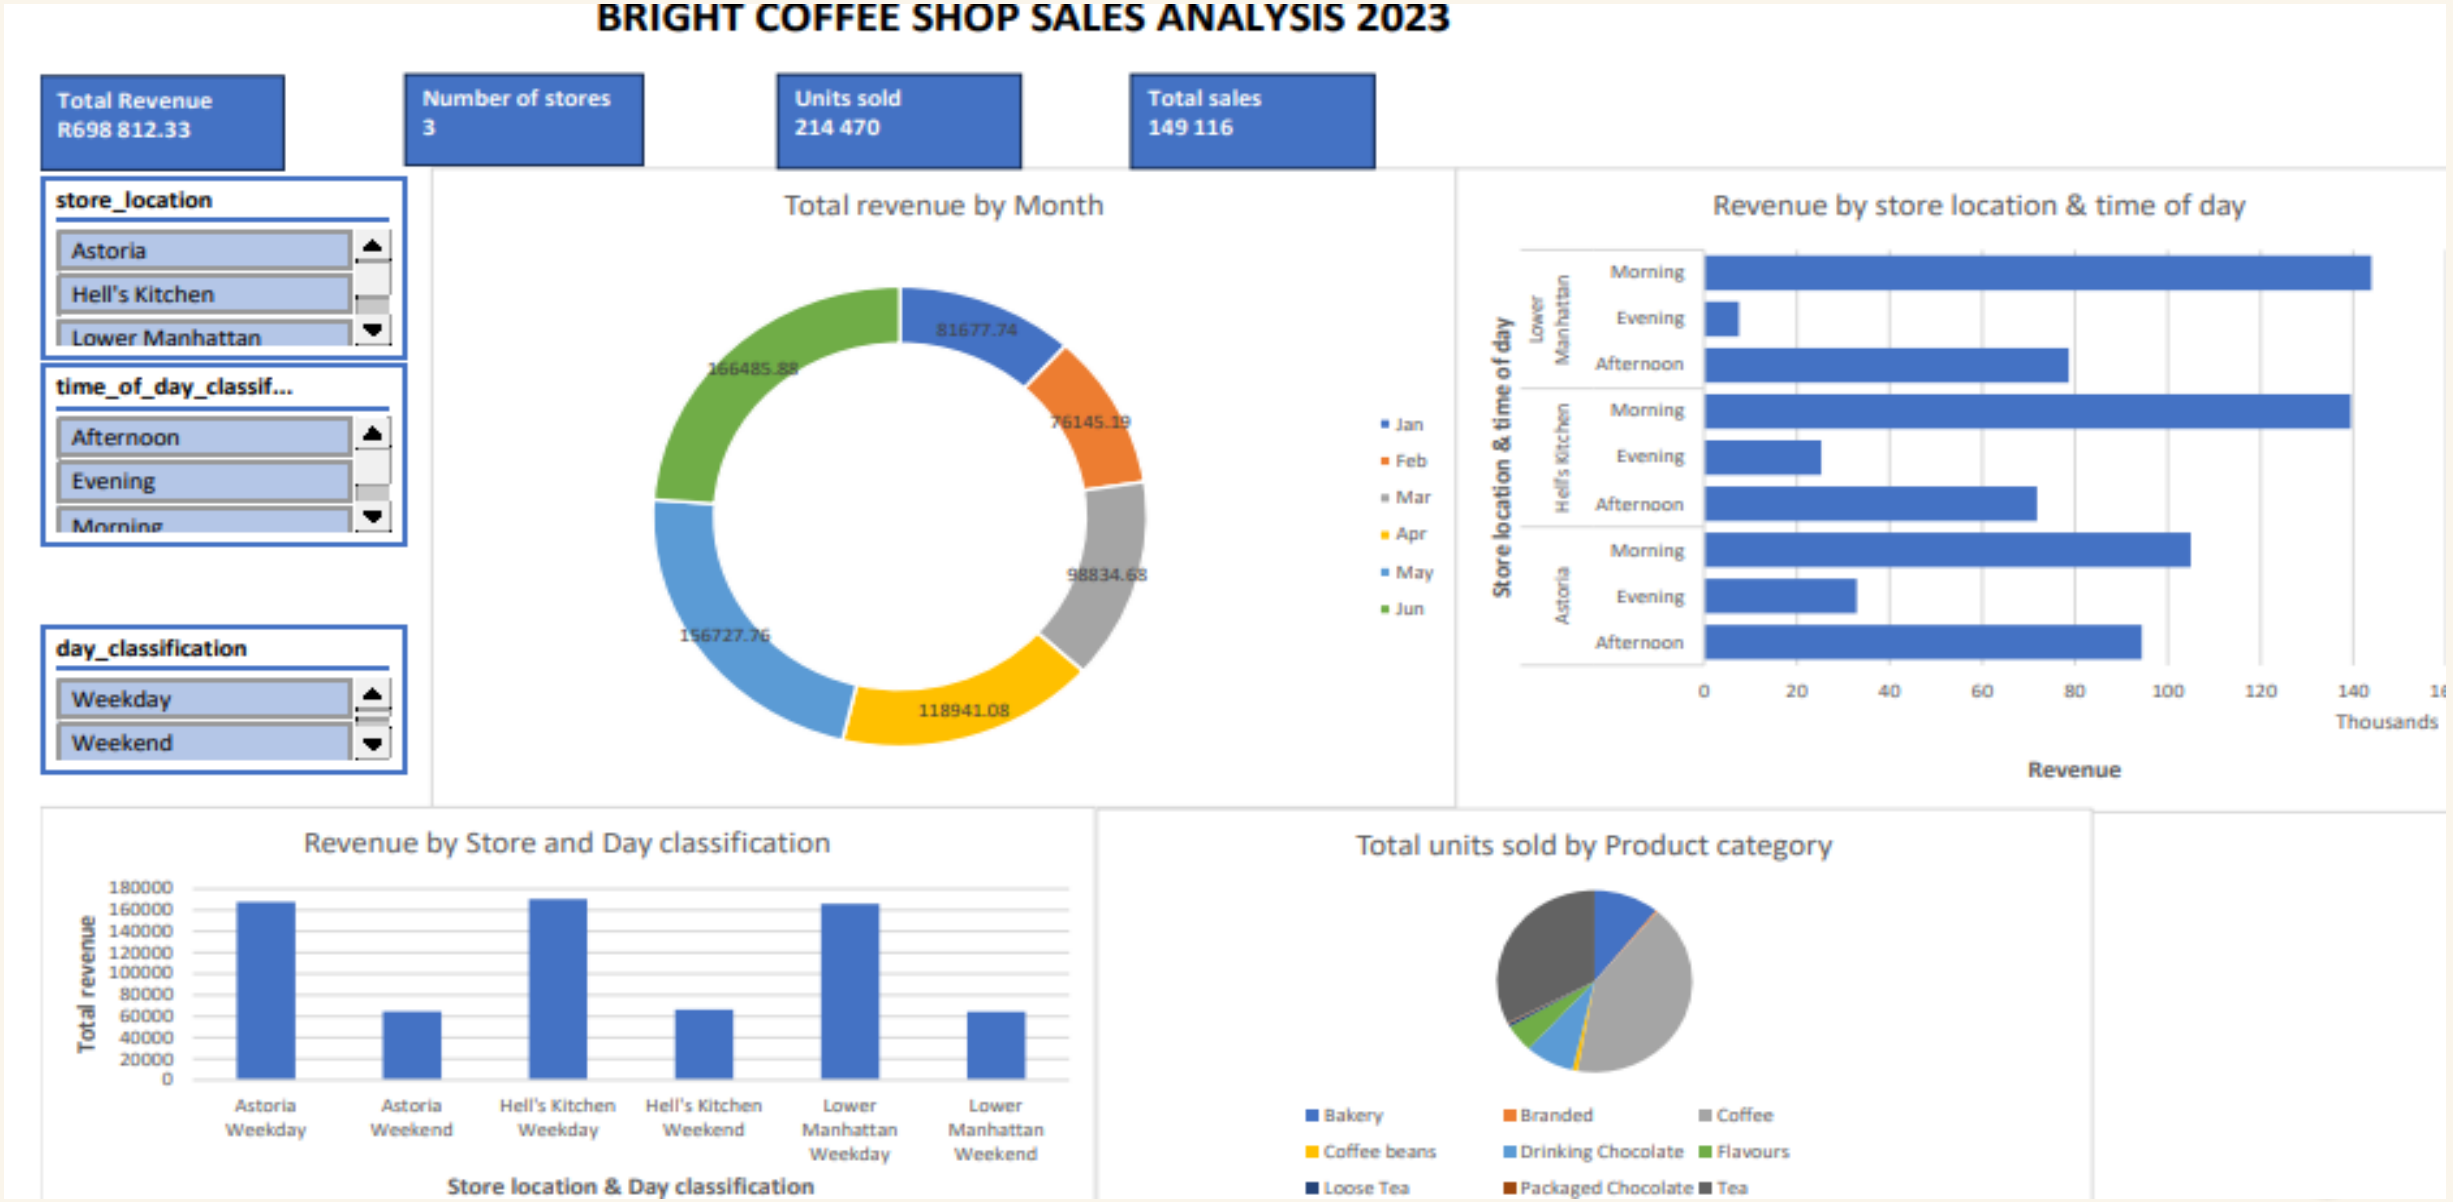

Lower revenue alone does not necessarily mean that a store is performing poorly.

Conclusion

Bright Coffee has a clear opportunity to increase revenue by strengthening its best performing product categories, capitalising on peak morning demand, and improving the performance of lower-selling products. The analysis identifies coffee as the leading product category, followed by tea and bakery products, with mornings representing the strongest sales period across all three stores.

To support sustainable revenue growth, management should prioritise product availability and efficient staff during peak hours, introduce targeted promotions and product bundles, and use store-level sales data to guide operational decisions. Regular monitoring of revenue, sales volume and profitability will help the business evaluate these initiatives and make data-driven decisions that improve overall performance.
